## Executive Summary

“Directive (EU) 2016/2102 of the European Parliament and of the Council of 26 October 2016 on the accessibility of the websites and mobile applications of public sector bodies” (the Directive) requires Member States to ensure that websites and mobile applications (apps) of public sector bodies are fully accessible to persons with disabilities.<sup>1</sup>

The National Disability Authority (NDA) is named as the National Monitoring Body in the 2020 Regulations. NDA is required under the Directive and Implementing Decision 2018/1524 to provide monitoring data on the In-depth and Simplified Reviews conducted.<sup>2</sup>

Ireland’s first monitoring report was submitted to the EU Commission on 22<sup>nd</sup> December 2021.<sup>3</sup> Due to a delay of two years in the transposition of the Directive into Irish legislation and in resourcing the establishment of NDA as the National Monitoring Body, NDA conducted reviews on a reduced number of websites and mobile apps for the monitoring period 2018-2021, leaving a shortfall of 14 In-depth and 125 Simplified Reviews. This supplemental report contains the results of these reviews which have subsequently been conducted. Table I shows the number of reviews NDA was required to conduct in the first monitoring period, the numbers conducted in 2021 and the numbers conducted in 2022.

**Table I: Overview of number and types of reviews**

Monitoring period	Year	Simplified	In-depth	Mobile
<b>1<sup>st</sup> Monitoring Period as per Directive</b>	2018-2021	175	19	4
<b>Number carried out</b>	Mar - Dec 2021	50	5	4
<b>Numbers carried out</b>	Jan-October 2022	185	14	0

Source: NDA and Commission Implementing Decision (EU) 2018-1524 of 11 October 2018

During the process to conduct these “shortfall reviews”, NDA has made significant enhancements to how it conducts reviews, gathers accessibility data and presents that data to relevant stakeholders. These enhancements and improvements are designed to

<sup>1</sup> <https://nda.ie/publications/communications/eu-web-accessibility-directive/>

<sup>2</sup> <https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32018D1524&rid=1>

<sup>3</sup> <https://digital-strategy.ec.europa.eu/en/library/web-accessibility-directive-monitoring-reports>

provide top-line data of the performance of public sector websites, enable public bodies to compare their compliance with similar bodies in their sector and provide easy-to-access and understand data on the compliance of each site.

These enhancements include:

- Better and more data analysis including tables and graphs presenting the total number of fails per WCAG 2.1 Success Criteria, the user impact of those failures and the most frequently occurring errors.
- Comparative data for specific grouping of public bodies monitored including the higher education, further education, Local Authority and transport sectors.
- Inclusion of tests specific to the updated version of the harmonised European standard EN 301 549 v3.2.1.<sup>4</sup>

## **Key findings**

The following are the three largest issues recorded in this monitoring period. The results sections for all In-depth Review and Simplified Review provide a comprehensive listing of issues.

### **Accessibility Statements**

In contrast to 2021, a majority of websites subject to In-depth Review contain an Accessibility Statement that aligns with the Commission Implementing Decision 2018/1053 and NDA's guidance in this regard. However not all Accessibility Statements contain adequate information on the Enforcement Procedure or the review conducted by the organisation on which their statement of compliance with the Directive is based.

### **Colour contrast**

Insufficient colour contrast errors accounted for the highest number of errors on 81 sites subject to Simplified Review (n=185) and the highest total number of errors across all sites subject to In-depth Review (464 errors, 30%) . Some public bodies have addressed colour contrast issues by remediating the styles used in their website page templates and this significantly reduced their number of errors overall. While colour contrast is not deemed to be the most critical issue experienced by users, the volume and variety of these errors indicate that it needs to receive priority and ongoing attention.

NDA recommends that public bodies adopt an ongoing review process to periodically check the accessibility of their websites and prioritise issues with the sites' template design for remediation.

---

<sup>4</sup> EN 301 549 became the official standard for compliance under the WAD on 12 February 2022.  
[https://www.etsi.org/deliver/etsi\\_en/301500\\_301599/301549/03.02.01\\_60/en\\_301549v030201p.pdf](https://www.etsi.org/deliver/etsi_en/301500_301599/301549/03.02.01_60/en_301549v030201p.pdf)

## PDFs

PDF errors accounted for the highest total number of errors for 54 sites subject to Simplified Review (n=185). All PDFs tested on sites subject to In-depth Review contained errors. Many organisations have contacted NDA in this regard and some are taking steps to publish more content in HTML to avoid the difficult, and costly work required to make PDFs accessible. Application forms in inaccessible PDF have a critical impact on some users' ability to use a service online and should be prioritised for remediation.

NDA recommends that accessibility is considered at the earliest stage of content creation. The accessibility features and checkers in office application software such as MS Word and Adobe Acrobat Pro should be used. Where content and PDFs are generated external to the organisation, a clear set of accessibility requirements for PDFs should be provided to the content creator or print design company.

NDA recommends that PDF forms should be avoided for all online services and accessible HTML used instead. This may require the use of specialist development skills.

## Name, role value

Interactive elements on public sector websites include application forms, search forms and widgets such as cookie banners. The "Name, role value" WCAG 2.1 Success Criteria (SC) is an indicator of how accessible these elements may be. Errors related to this SC accounted for the highest total of errors on 54 sites subject to Simplified Review (n=185) and the second largest total number of errors across all sites subject to In-depth Review (229 errors, 15%).

NDA recommends that all interactive elements, including forms and widgets are designed and implemented to be accessible. Specialised supports from accessibility experts may be required to ensure forms and online services are accessible from start to finish.

## Managing web accessibility – organisational roles

The top three issues identified above point to the variety of roles involved in designing, developing and publishing content to a website. A graphic designer or UX specialist often defines the branding and styles, including the choice of colours, for a website. A communications officer typically manages the creation and publication of content in PDF.

Forms and interactive elements are often designed and developed by UX specialists in conjunction with technical website developers.

NDA provides guidance for each of these roles in its [Web Accessibility Techniques](#) guidance.

This variety of roles points to the need for web accessibility to be addressed and managed by a variety of personnel within an organisation and by contractors used by that organisation. While NDA continues to provide training on various aspects of web accessibility, it is important that public bodies develop an accessibility policy and maintain a sustainable accessibility program that addresses accessibility across the websites lifecycle from procurement, to development and testing to ongoing maintenance and publication of content.

### **Managing web accessibility – using your monitoring data**

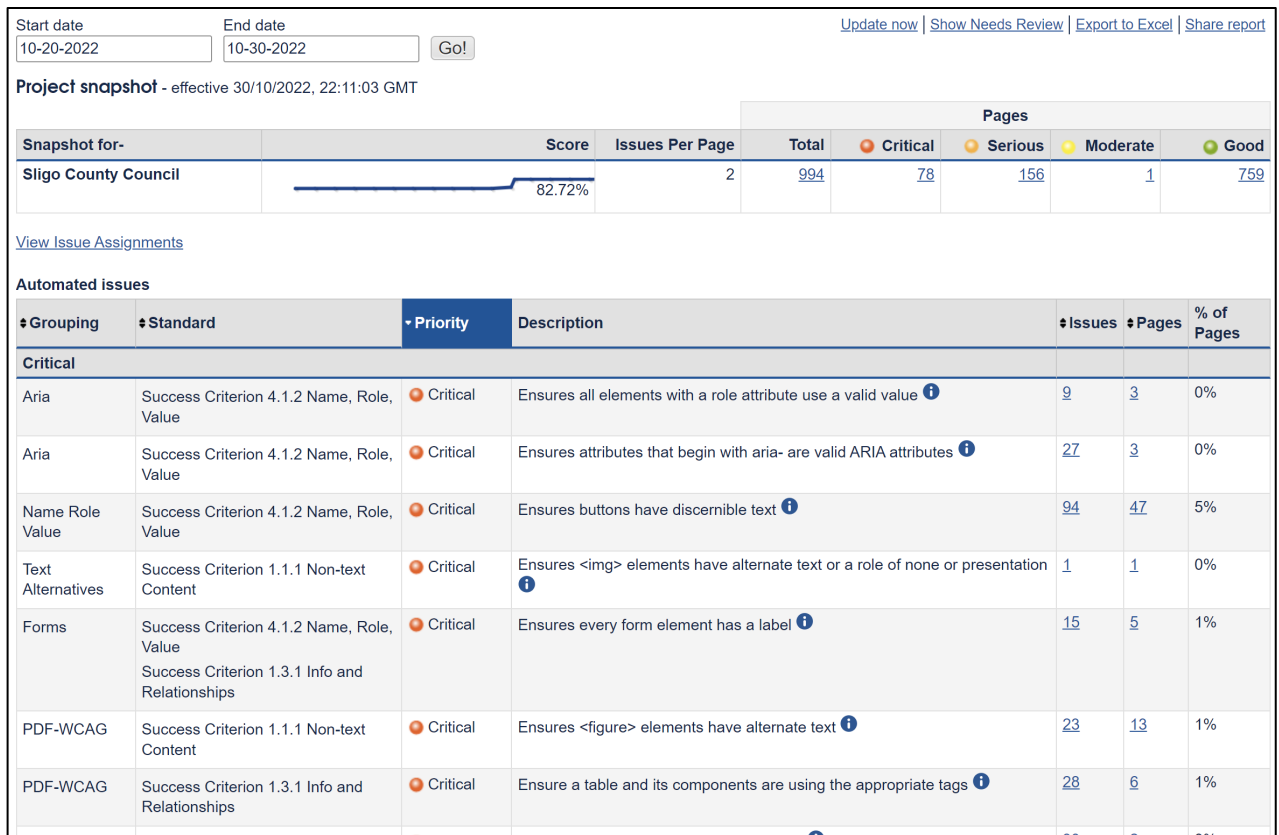

The monitoring methodology used by NDA provides public bodies subject to monitoring with detailed and accurate data on the compliance of their websites and mobiles apps.

NDA provides public bodies subject to In-depth Review with an Executive Summary which outlines main issues, user impacts and recommendations for a remediation strategy. A spreadsheet provides a dashboard of the data from the review results, full details of all issues identified and advice on how to fix them.

NDA provides public bodies subject to Simplified Review with access to their full scan results via a link to the scanning software. Scans are updated weekly and public bodies have access to a dashboard which provides the results of scans on their website, a prioritised listing of issues identified and advice on how to fix them.

NDA recommends public bodies use their In-depth or Simplified Review reports to gain a high level understanding of their website's accessibility compliance and to address accessibility in a planned and systematic way.

Image 1 shows an example of the Simplified Review dashboard provided to public bodies subject to monitoring. It provides data on the number of issues identified, their impact on a user, the related WCAG 2.1 Success Criteria as well as links to the exact location of that error and advice on how to fix it. The Accessibility Score and graph tracks improvements made on a weekly basis.

**Image 1: Simplified Review dashboard**

## Managing web accessibility - from minimum compliance to Universal Design

Many public bodies subject to In-depth and Simplified Reviews for the monitoring period 2021 have made significant progress in reducing the number of errors during 2022 and improving their Accessibility Score. While the software used to conduct Simplified Reviews scans hundreds of pages on a weekly basis, it can test a maximum of 57% of WCAG 2.1 Success Criteria. In-depth manual reviews frequently reveal further errors when conducted by a person using Assistive Technology or when other tests are conducted on the site. It is important that public bodies consider monitoring compliance with the Directive as the first step in improving the accessibility of their websites and mobile apps for all.

NDA recommends that once an organisation confirms its websites and mobile apps are compliant with the Directive, they continue to focus on ensuring all communications can be accessed, understood and used by all users through taking a Universal Design approach.

The “[Customer Communications Toolkit for the Public Service - A Universal Design Approach](#)” was developed by the Centre for Excellence in Universal Design with the support of the Department of Public Expenditure and Reform. It is intended that the Toolkit be used in the Public Service for planning, training and informing staff and contractors. A third edition is due to be published in early 2023.

## Report structure and scope

This supplemental report contains data on the 14 In-depth and 185 Simplified Reviews conducted by NDA during the period January to October 2022. Ireland's first monitoring report was submitted to the EU Commission on 22<sup>nd</sup> December 2021.

The updated monitoring methodology used by NDA to conduct the reviews and collate the monitoring data and report is described below.

This report does not repeat information required by the Directive such as details about the regulations transposing the Directive in Ireland previously provided in Ireland's 2021 national monitoring report.<sup>5</sup>

Implementing Decision 2018/1524 requires the National Monitoring Body to maintain a Register of websites and mobile apps for review in the current monitoring period. The selection of the sample for review should include websites representing as much as possible the variety of services provided by the public sector bodies. This includes "social protection, health, transport, education, employment and taxes, environmental protection, recreation and culture, housing and community amenities and public order and safety." NDA chose the websites and mobile apps for review based on a survey circulated in August 2021 and ongoing consultation with stakeholders and disabled persons organisations through, for example, the network of departmental Disability Consultative Committees.<sup>6</sup>

Table I shows the number of reviews NDA was required to conduct in the first monitoring period, the numbers conducted in 2021 and the numbers conducted in 2022.

---

<sup>5</sup> The first monitoring report contained a description of the context to web accessibility in Ireland including national disability statistics and the international legislation and policy on web accessibility. Irish legislation and policy was then described in terms of national web accessibility obligations. An overview of the Irish regulations transposing the Directive described the role of the National Monitoring Body and obligations on monitoring and reporting including the standards to be used.

<sup>6</sup> See page 23 of [Ireland's Monitoring Report for the EU Web Accessibility Directive](#).

**Table 1: Overview of number and types of reviews**

Monitoring period	Year	Simplified	In-depth	Mobile Apps
1 <sup>st</sup> Monitoring Period as per Directive	2018-2021	175	19	4
Number carried out	Mar - Dec 2021	50	5	4*
Number carried out	Jan-October 2022	185**	14	0

Source: Commission Implementing Decision (EU) 2018-1524 of 11 October 2018

\*The first monitoring report reported the number of mobile app reviews conducted in 2021 was two. While two mobile apps were chosen for review, both the Android and iOS versions of each apps were reviewed, resulting in NDA conducting the full quota of mobile app reviews.

\*\*NDA continued to monitor the 50 websites reviewed in 2021. Ten additional sites were included for Simplified Review following requests from some public bodies to be included in this monitoring period. This report therefore contained the monitoring data for all 185 Simplified Reviews.

### **How public bodies may use this report**

All public bodies subject to monitoring in this period have received a formal Notification of Monitoring from NDA and instructions on how to access their Simplified Review scan results and In-depth Review reports.

Public bodies subject to In-depth Review can view a summary of their website's compliance below.

Public bodies subject to Simplified Review can use this report to view:

- A summary snapshot of their websites scan results and Accessibility Score in [Annex 2](#);
- How their Accessibility Score compares with other websites in [Annex 3](#); and
- The top 7 issues for their website in [Annex 4](#).<sup>7</sup>

Organisations in the Local Authority, Higher Education, Transport and Further Education and Training sectors can view comparative data on their website's compliance in comparison to other public bodies in the same sector.

---

<sup>7</sup> All Simplified Review data is based on scans conducted in July 2022.

## In-depth Reviews

### In-depth Review methodology

EN 301 549 v3.2.1<sup>8</sup> is referenced as the harmonised standard which provides a presumption of conformity with the EU WAD. The relevant clauses in EN 301 549 against which compliance with the EU WAD must be confirmed are:

- Clause 5: Generic Requirements (3 criteria)
- Clause 7: ICT with Video Capabilities (9 criteria)
- Clause 9: Web (based on WCAG 2.1)
- Clause 12: Documentation and Support Services (2 criteria)

See Annex I for more details on these clauses. EN 301 549 states that Conformance with W3C Web Content Accessibility Guidelines (WCAG 2.1) Level AA is equivalent to conforming with Clause 9: Web. NDA therefore uses WCAG 2.1 as the means to test compliance with Clause 9.

For Clauses 5, 7, 9 and 12, NDA conducted tests against all relevant criteria as part of the In-depth Reviews.

From June to August 2022 NDA conducted a public procurement exercise to provide a robust and transparent **Review and Reporting Process** for conducting in-depth, manual reviews of mobile apps and websites, as specified in Commission Implementing Decision (EU) 2018/1524. This contract was awarded to Deque Systems.

The sampling of pages remained the same as those used previously and was based on sampling criteria in Implementing Decision 2018/1524.<sup>9</sup>

### Testing tools

The following tools sets were used for the In-depth Reviews:

Accessibility testing tools:

- axeAuditor for WCAG 2.1 Success Criteria, including NVDA and Chrome
- manual inspection for EN 301 549 clauses
- axe Monitor 7.1 axe-pdf Engine for testing PDF documents

---

<sup>8</sup> [https://www.etsi.org/deliver/etsi\\_en/301500\\_301599/301549/03.02.01\\_60/en\\_301549v030201p.pdf](https://www.etsi.org/deliver/etsi_en/301500_301599/301549/03.02.01_60/en_301549v030201p.pdf)

<sup>9</sup> See page 28 “Ireland’s Monitoring Report for the EU Web Accessibility Directive”, <https://nda.ie/publications/communications/eu-web-accessibility-directive/monitoring%20reports/monitoring-report-eu-wad-ireland-2021.pdf>

All public bodies subject to In-depth Review will receive a summary of issues identified including a description of priority issues to address and the user impact and a detailed report outlining all issues identified and providing guidance on how to address them.

### User impact

In-depth Reviews use WCAG 2.1 Success Criteria to check user impact based on four basic principles for ensuring accessibility for persons with disabilities:

1. Can all your users, with the abilities and senses that they possess, **perceive** the information your application presents to them?
2. Can your users, with their specific input device or assistive technology, **operate** all the controls within your application's user interface?
3. Can your users **understand** the information and the user interface controls?
4. Is your content **robust** enough that it can be interpreted reliably by a wide variety of user agents, including assistive technologies?

Table 2 provides a description of the 5 user impacts provided for In-depth Reviews.

**Table 2: Issues by User Impact**

Impact	Impact Description
<b>Blocker</b>	Prevents some users with disabilities from using core content.
<b>Critical</b>	Prevents some users with disabilities from accessing certain parts of the content, potentially rendering it unusable.
<b>Serious</b>	Presents serious barriers for some users with disabilities and will partially prevent them from using portions of the content.
<b>Moderate</b>	Presents some barriers for users with disabilities that will reduce their overall experience with the content.
<b>Minor</b>	Causes some nuisance or can be annoying, but not presenting barriers for users with disabilities.

## In-depth Reviews results

NDA conducted a further 14 In-depth Reviews to address the shortfall in numbers for 2021.

<sup>11</sup> [Houses of the Oireachtas](#) – national Parliament of Ireland

## Key findings

Table 4 provides the average number of WCAG 2.1 AA issues per page, the total WCAG 2.1 Success Criteria passed and the total failures per site. Of the 1154 errors identified, the highest number of errors related to:

- **Colour contrast (SC 1.4.3 – 30%)**
  - Example: Image 2 shows poor colour contrast on the navigation menu. The contrast ratio between the text and background for “What’s new” is 2.3:1.
  - Solution: Ensure colour contrast between foreground and background is 4.5:1 for regular text and 3:1 for large text (e.g. headings)

Image 2: poor colour contrast

- **Name, role, value (SC 4.1.2 – 15%).**
  - Example: Image 3 shows a Cookie Modal whose ‘close button’ is not correctly coded. A screen reader will not determine what this “X” is for and a person using a keyboard only will not be able to access the control.
  - Solution: Every user interface control must have a role along with any applicable states and properties so that all users may interact with the control.

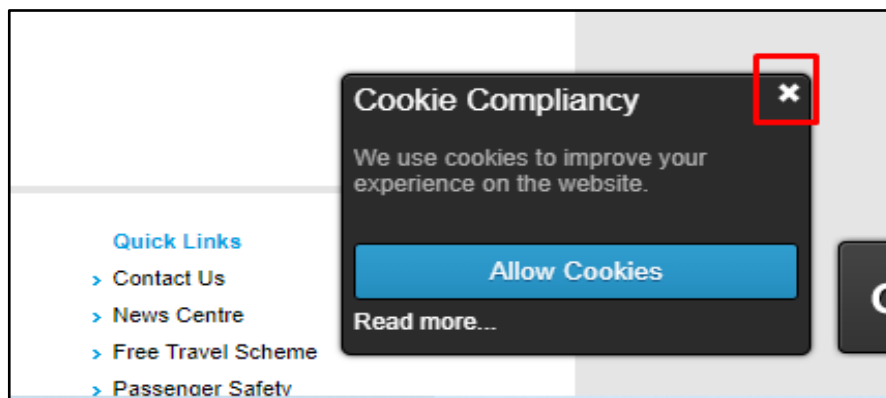

Image 3: interface control incorrectly coded

- **Non-text Content (SC 1.1.1 – 7%).**

- Example: Image 4 shows an image of an arrow that acts as a link to another page. The arrow image contains no “alternative text” and therefore is “invisible” to a screen reader user.
- Solution: Ensure all images that provide information or have a function have alternative text that describes its information or function.

**Image 4: no alt text**

**Table 4: average number of WCAG 2.1 AA issues per page**

SC	Description	SC Level	Issues	#errors as a % of total

## I. An Garda Síochána<sup>12</sup>

### Key findings

In total, 114 errors (112 WCAG Success Criteria (SC) and 2 EN 301 549 clauses) were identified across 12 pages and 5 components assessed (Figure 4). This equates to a compliance rate of 56% for the WCAG 2.1 SC tested (Figure 5).

### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact, with the second highest number classified as Critical (Figure 6).

### WCAG issues

Four success criteria, were related to 51% of all issues:

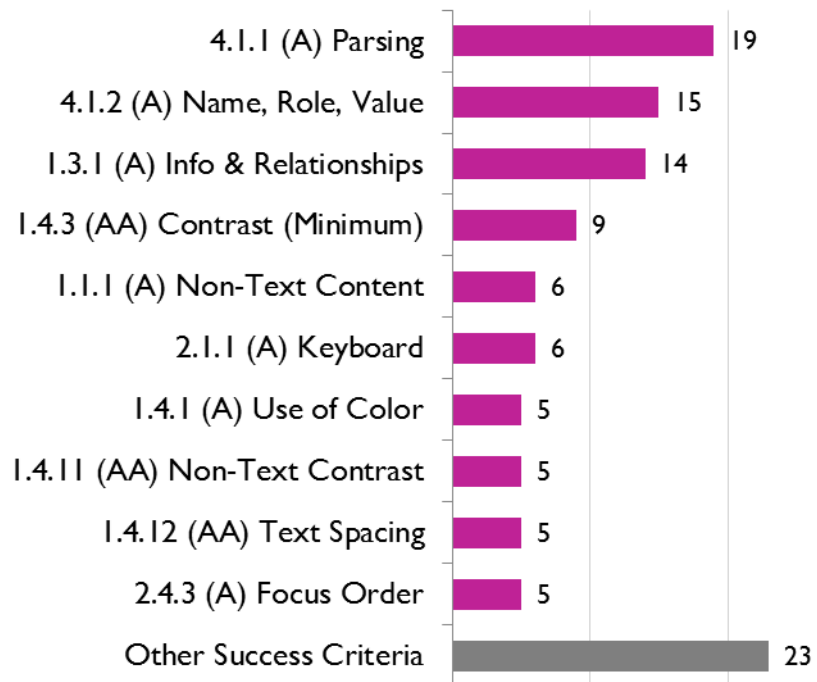

- Parsing – 17%

---

<sup>12</sup> [An Garda Síochána](#) – national police service of Ireland

- Name, Role, Value – 13%
- Info and Relationships – 13%
- Colour Contrast – 8%

**Figure 7: No. of occurrences for top 10 WCAG errors**

[See accessible table in Annex 5](#)

### EN 301 549 issues

Two EN 301 549 errors related to “Clause 5.2 Activation of accessibility features” were deemed “Not supported”. Eleven clauses were deemed “Not applicable” and two clauses were deemed to be “Supported”; 12.1.1 Accessibility and compatibility features and 12.1.2 Accessible documentation.

### Accessibility Statement

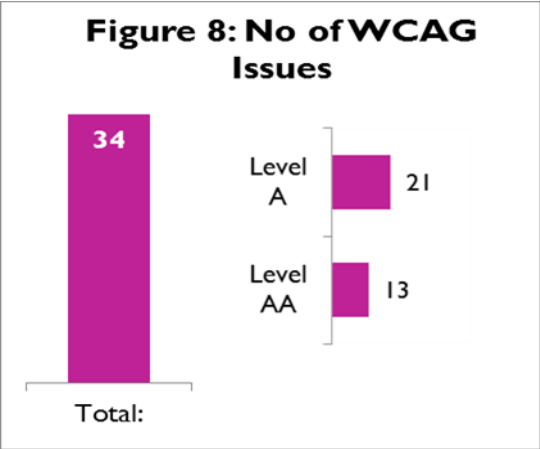

All essential aspects of the Accessibility Statement were found to be present.<sup>13</sup>

<sup>13</sup> <https://www.garda.ie/en/accessibility-statement>

2. Citizens Information<sup>14</sup>

Key findings

In total, 34 errors (34 WCAG SC and 0 EN 301 549 clauses) were identified across 11 pages and 5 components assessed (Figure 8). This equates to a compliance rate of 68% for the WCAG 2.1 SC tested (Figure 9).

User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact, with only three errors classified as “Critical”, the lowest number of this category of user impact identified for any site reviewed (Figure 10).

WCAG

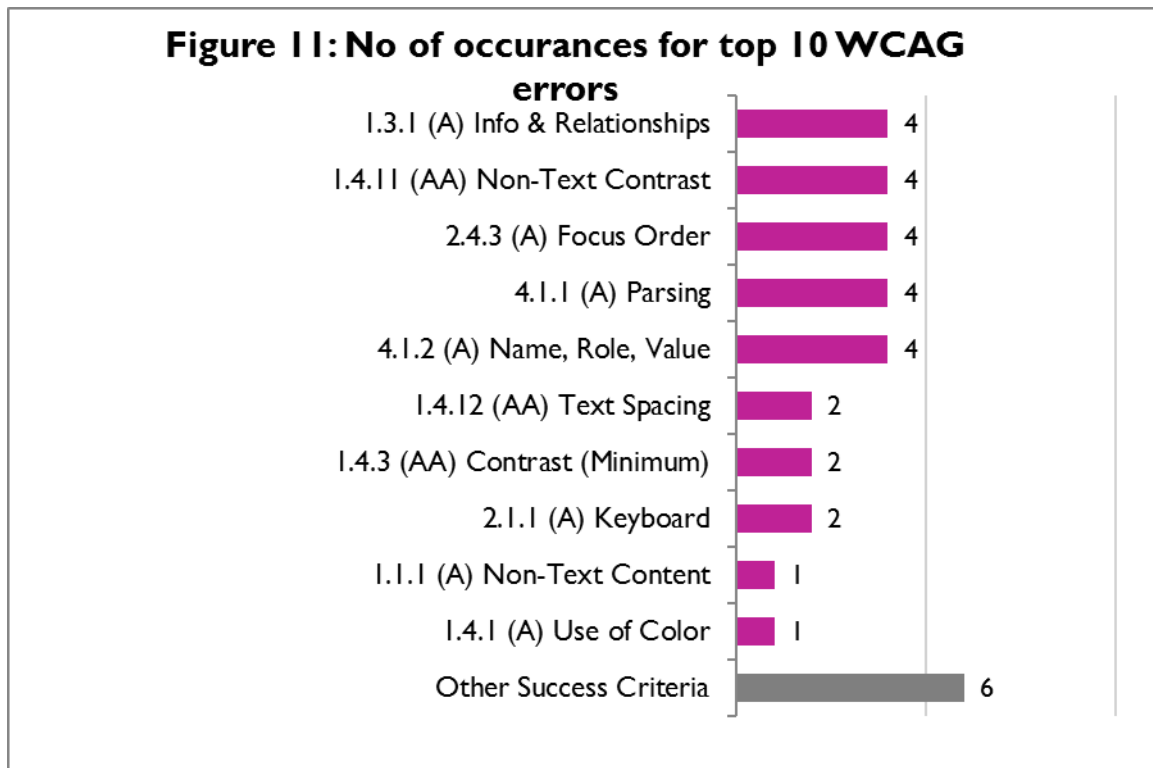

Issues

Four success criteria, were related to 48% of all issues:

- Info and Relationships – 12%
- Non-Text Contrast – 12%

<sup>14</sup> [Citizens Information](#) – website providing information on rights and entitlements

- Focus Order – 12%
- Parsing – 12%

[See accessible table in Annex 5](#)

### EN 301 549 issues

No errors were identified for the EN 301 549 clauses reviewed.

### PDF

Six additional WCAG 2.1 SC errors were identified on the PDF “Guide to Entitlements for People with Disabilities 2022” reviewed.<sup>15</sup>

### Accessibility Statement

Three aspects of the Accessibility Statement were inadequately described; the statement’s scope, how and when the Statement was prepared and the enforcement procedure.<sup>16</sup>

<sup>15</sup>

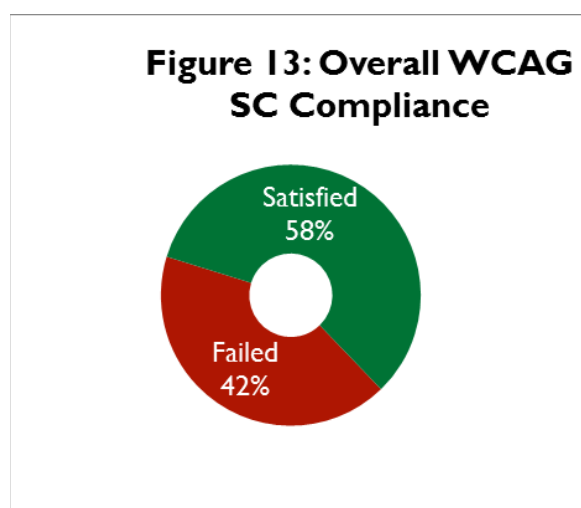

[https://www.citizensinformationboard.ie/downloads/guides/guide\\_to\\_entitlements\\_for\\_people\\_with\\_disabilities\\_2022.pdf](https://www.citizensinformationboard.ie/downloads/guides/guide_to_entitlements_for_people_with_disabilities_2022.pdf)

<sup>16</sup> <https://www.citizensinformation.ie/en/accessibility.html>

### 3. Dublin Bus<sup>17</sup>

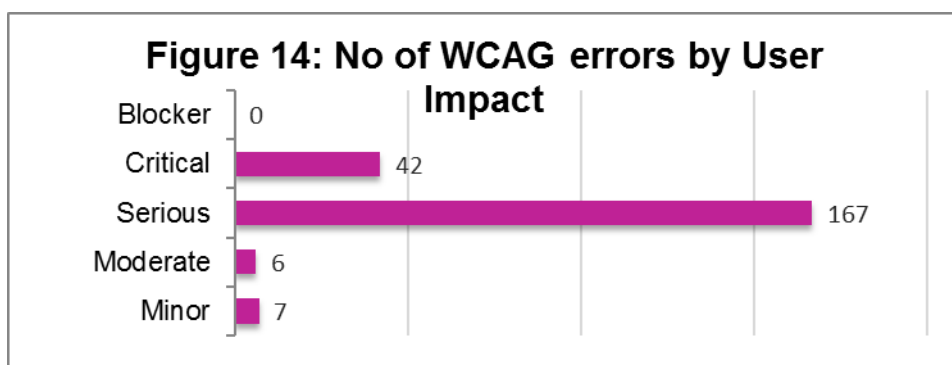

#### Key findings

In total, 227 errors (222 WCAG 2.1 SC and 5 EN 301 549 clauses) were identified across 13 pages and 7 components assessed (Figure 12). This equates to a compliance rate of 58% for the WCAG 2.1 SC tested (Figure 13).

#### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact with a large number of “Critical” errors also present (Figure 14).

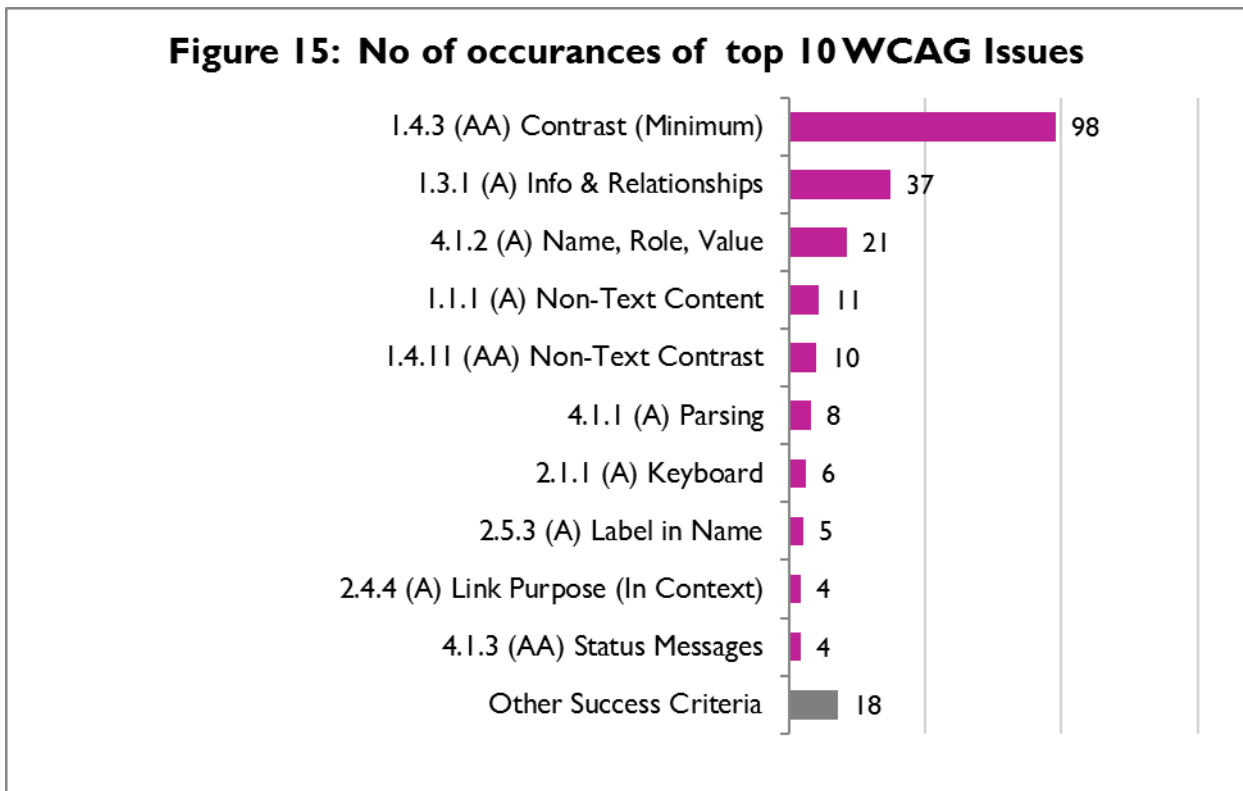

#### WCAG issues

Four success criteria, were related to 73% of all issues:

- Text Contrast – 43%
- Info and Relationships – 16%
- Name, Role and Value – 9%

<sup>17</sup> Main public operator of buses in Dublin

- Non-text Content – 5%

[See accessible table in Annex 5](#)

### EN 301 549 issues

Five EN 301 549 errors related to clauses 5.2 “Activation of accessibility features” 7.1.5 “Spoken subtitles”, 7.2.1 “Audio description playback”, 7.2.2 “Audio description synchronization” and 7.2.3 “Preservation of audio description” were deemed “Not supported”.

### PDF

Two additional WCAG 2.1 SC errors were identified on the PDF “Customer Charter” reviewed.<sup>18</sup>

### Accessibility Statement

The Accessibility Statement did not align with the requirements of the Directive and contained no information on aspects such as the Enforcement procedure or the last review conducted:<sup>19</sup>

<sup>18</sup> <https://www.dublinbus.ie/Global/Customer%20Charter%202017%20English%20Final.pdf>

<sup>19</sup> <http://www.dublinbus.ie/Your-Journey/Accessibility/Accessibility-Statement/>

#### 4. Irish Rail<sup>20</sup>

##### Key findings

In total, 164 errors (164 WCAG and 0 EN 301 549 clauses) were identified across 12 pages and 4 components assessed (Figure 16). This equates to a compliance rate of 62% for the WCAG 2.1 SC tested (Figure 17).

##### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact with a large number of “Critical” errors also present (Figure 18).

##### WCAG issues

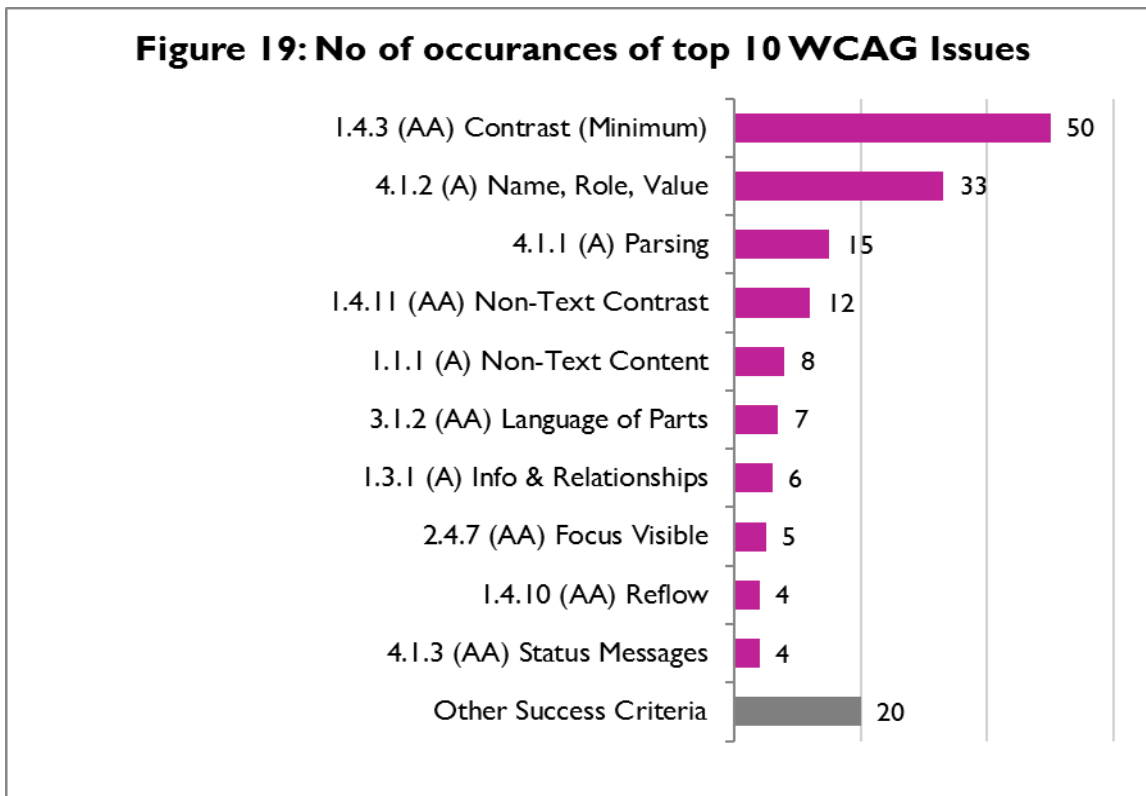

Four success criteria, were related to 66% of all issues:

- Text Contrast – 30%
- Name, Role, Value – 20%
- Parsing – 9%

<sup>20</sup> [Irish Rail \(Iarnród Éireann\)](#) – operator of the national railway network of Ireland

- Non-text Contrast – 7%

[See accessible table in Annex 5](#)

### EN 301 549 issues

No failures were identified for the EN 301 549 clauses reviewed.

### PDF

Four additional WCAG 2.1 SC errors were identified on the PDF “Timetables by Route” reviewed.<sup>21</sup>

### Accessibility Statement

The Accessibility Statement did not align with the requirements of the Directive and contained no information on aspects such as the Enforcement procedure or the last review conducted.<sup>22</sup>

<sup>21</sup> <https://www.irishrail.ie/en-ie/train-timetables/timetables-by-route>

<sup>22</sup> <https://www.irishrail.ie/en-ie/travel-information/accessibility-onboard-trains/iarnrod-eireann-website-accessibility>

## 5. Limerick City and County Council

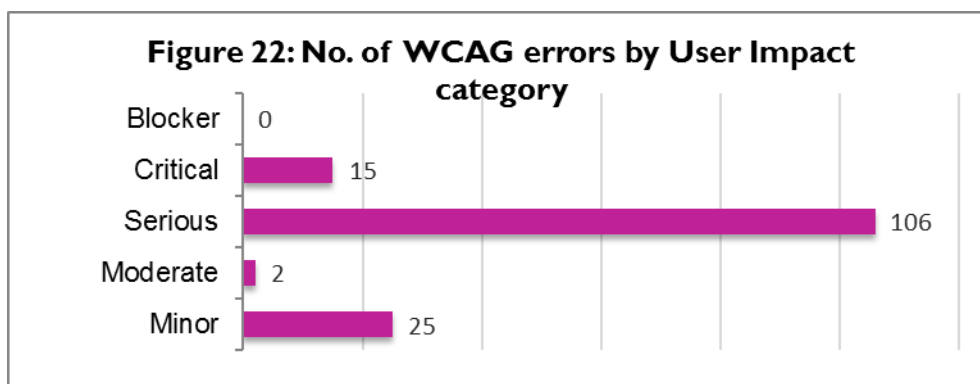

### Key findings

In total, 148 errors (148 WCAG 2.1 SC and 0 EN 301 549-specific) issues were identified across 11 pages and 3 components assessed (Figure 20). This equates to a compliance rate of 52% for the WCAG 2.1 SC tested (Figure 21).

### User Impact

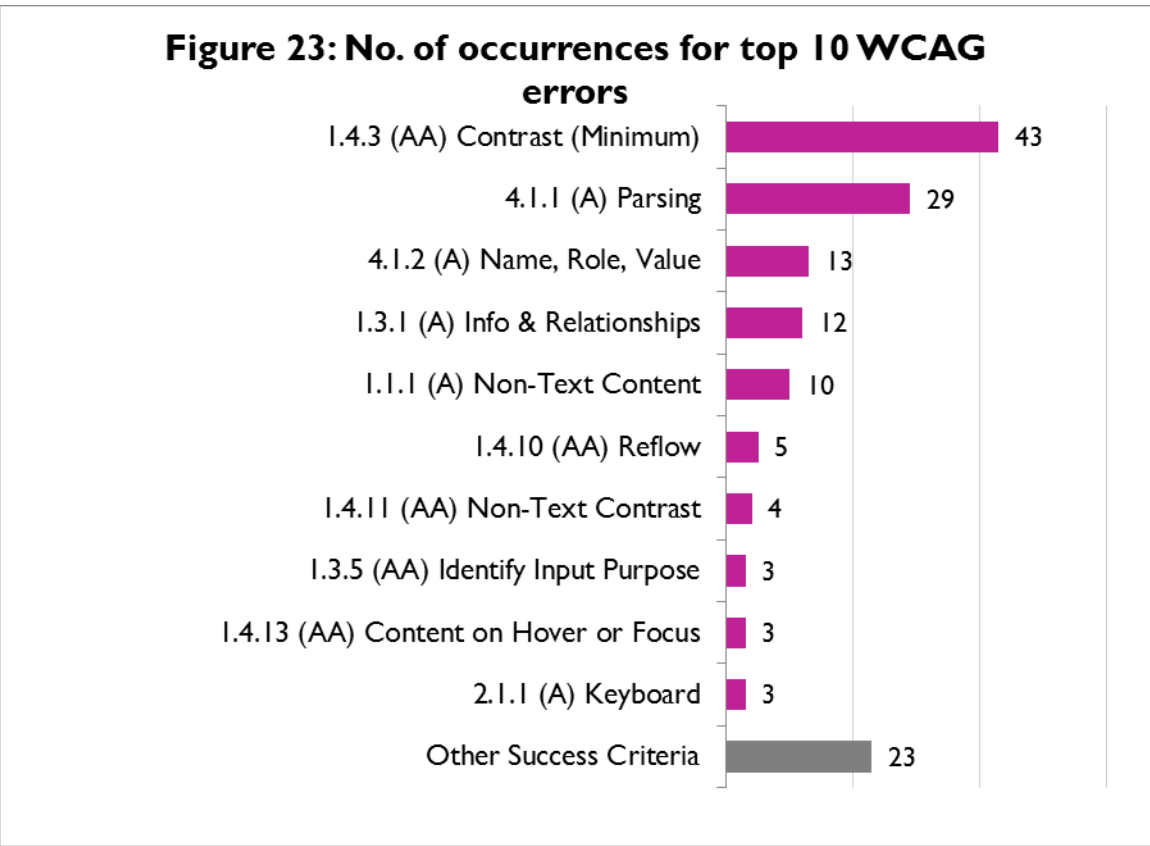

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact (Figure 22).

### WCAG issues

Four success criteria, were related to 66% of all issues:

- Text Contrast – 29%
- Parsing – 20%
- Name, Role, Value – 9%
- Info and Relationships – 8%

[See accessible table in Annex 5](#)

### EN 301 549 issues

No failures were identified for the EN 301 549 clauses reviewed.

### PDF

Three additional WCAG 2.1 SC errors were identified on the PDF “Mount St Lawrence Cemetery Guide” reviewed.<sup>23</sup>

### Accessibility Statement

Two aspects of the Accessibility Statement were inadequately described; the statement’s scope, and the enforcement procedure.<sup>24</sup>

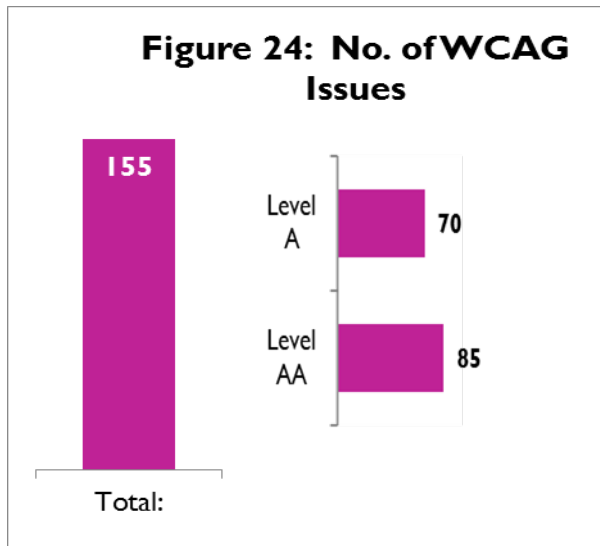

<sup>23</sup> <https://www.limerick.ie/discover/explore/historical-resources/limerick-archives/cemetery-records/mount-st-lawrence-cemetery>

<sup>24</sup> <https://www.limerick.ie/about/accessibility>

## 6. National Transport Authority<sup>25</sup>

### Key findings

In total, 155 errors (155 WCAG 2.1 SC and 0 EN 301 549 clauses) were identified across 11 pages and 5 components assessed (Figure 24). This equates to a compliance rate of 68% for the WCAG 2.1 Success Criteria (SC) tested (Figure 25).

### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact (Figure 26).

### WCAG issues

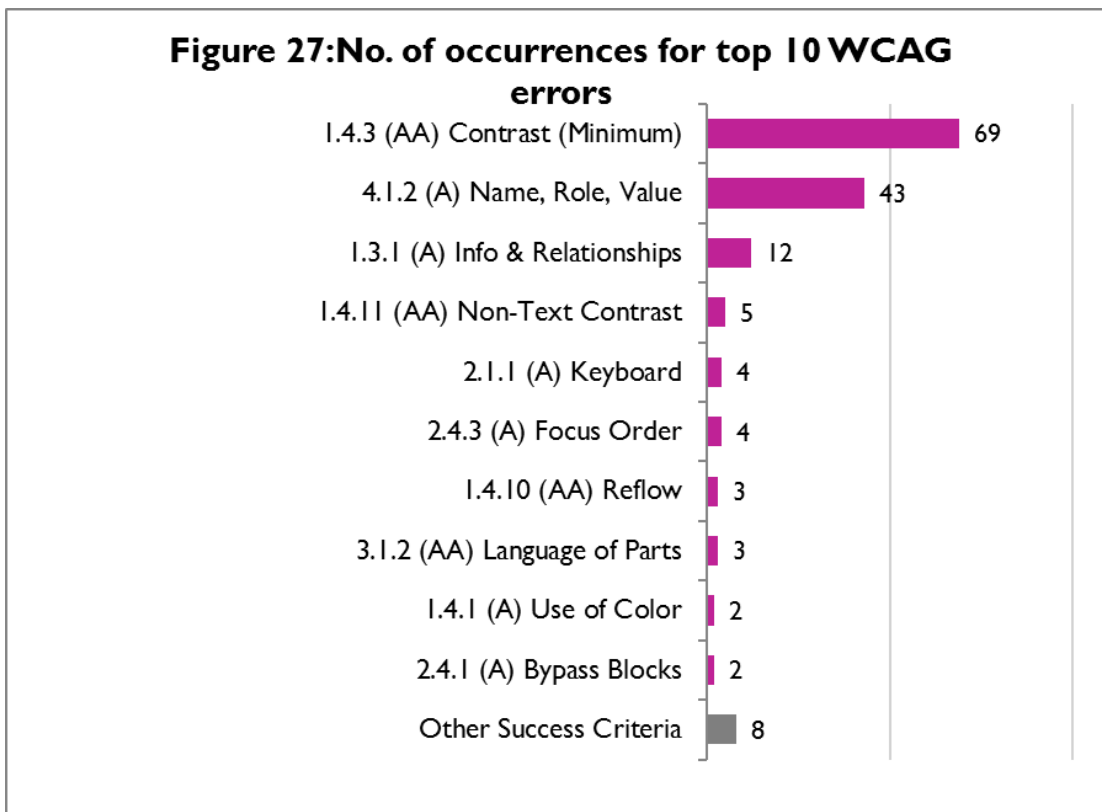

Four success criteria, were related to 84% of all issues:

- Text Contrast – 45%

---

<sup>25</sup> transport authority for Greater Dublin and the public transport licensing agency for Ireland.

- Name, Role and Value – 28%
- Info and Relationships – 8%
- Non-text Contrast – 3%

[See accessible table in Annex 5](#)

### EN 301 549 issues

No failures were identified for the EN 301 549 clauses reviewed.

### PDF

Three additional WCAG 2.1 SC errors were identified on the PDF “Cork Public Transport Network” reviewed.<sup>26</sup>

### Accessibility Statement

Two aspects of the Accessibility Statement were inadequately described; Feedback and contact information, and the enforcement procedure.<sup>27</sup>

## 9. Technological University Dublin<sup>33</sup>

### Key findings

In total, 187 errors (187 WCAG 2.1 SC and 0 EN 301 549 clauses) were identified across 9 pages and 4 components assessed (Figure 36). This equates to a compliance rate of 68% for the WCAG 2.1 Success Criteria (SC) tested (Figure 37).

**Figure 36: No. of WCAG Issues**

**Figure 37: Overall WCAG SC Compliance**

### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact (Figure 38).

**Figure 38: No. of WCAG errors by User Impact category**

### WCAG issues

Four success criteria, were related to 81% of all issues:

- Text Contrast – 60%
- Name, Role, Value– 13%
- Non-text Contrast – 4%

<sup>33</sup> Ireland's first technological university, established on 1 January 2019

- Info and Relationships – 4%

[See accessible table in Annex 5](#)

### EN 301 549 issues

No failures were identified for the EN 301 549 clauses reviewed.

### PDF

One additional WCAG 2.1 SC error was identified on the PDF “Academic calendar 2022-2023 Student Key Dates” reviewed.<sup>34</sup>

### Accessibility Statement

No identifiable Accessibility Statement was found on the website.<sup>35</sup>

<sup>34</sup> <https://www.tudublin.ie/media/website/explore/university-calendar/Academic-Calendar-2022-2023-Students-Key-Dates.pdf>

<sup>35</sup> The following page contains a commitment to accessibility for the University’s campuses: <https://www.tudublin.ie/explore/our-campuses/accessibility/>

## 10. Irish Human Rights and Equality Commission<sup>36</sup>

### Key findings

In total, 129 issues (125 WCAG 2, 1 SC and 4 EN 301 549-specific) issues were identified across 10 pages and 5 components assessed (Figure 40). This equates to a compliance rate of 62% for the WCAG 2.1 SC tested (Figure 41).

### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact (Figure 42).

### WCAG issues

Four success criteria, were related to 58% of all issues:

- Non-text Contrast – 18%
- Name, Role and Value – 18%
- Info and Relationships – 12%
- Text Contrast – 10%

<sup>36</sup> Ireland's national human rights and equality institution

[See accessible table in Annex 5](#)

### EN 301 549 issues

Four EN 301 549-specific clauses related to clauses 7.1.5 “Spoken subtitles”, 7.2.1 “Audio description playback”, 7.2.2 “Audio description synchronization” and 7.2.3 “Preservation of audio description” were deemed to be “Not supported”.

### PDF

One additional WCAG 2.1 SC error was identified on the PDF “Submission on the General Scheme of a Mother and Baby Institutions Payment Scheme Bill” reviewed.<sup>37</sup>

### Accessibility Statement

A general page on accessibility contains information on how to contact IHREC’s access officer but contains no other information required by the Directive.<sup>38</sup>

<sup>37</sup> <https://www.ihrec.ie/app/uploads/2022/10/Submission-on-the-General-Scheme-of-a-Mother-and-Baby-Institutions-Payment-Scheme-Bill.pdf>

<sup>38</sup> <https://www.ihrec.ie/accessibility/>

## 11. House of the Oireachtas<sup>39</sup>

### Key findings

In total, 99 (95 WCAG 2.1 SC and 4 EN 301 549 specific) issues were identified across 10 pages and 4 components assessed (Figure 44). This equates to a compliance rate of 66% for the WCAG 2.1 SC tested (Figure 45).

### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact (Figure 46).

### WCAG issues

Four success criteria, were related to 57% of all issues:

- Text Contrast – 30%
- Name, Role and Value – 9%

<sup>39</sup> [Houses of the Oireachtas](#) – national Parliament of Ireland

- Non-text Contrast - 9%
- Info and Relationships - 9%

[See accessible table in Annex 5](#)

### EN 301 549 issues

Four EN 301 549 errors were identified related to Clause 5.2 “Activation of accessibility features”, 7.1.5 “Spoken subtitles”, 7.2.1 “Audio description playback”, 7.2.2 “Audio description synchronization” and 7.2.3 “Preservation of audio description”.

### PDF

Three additional WCAG 2.1 SC errors were identified on the PDF “Participation of People with Disabilities in Political, Cultural, Community and Public Life” reviewed.<sup>40</sup>

### Accessibility Statement

The Accessibility Statement aligns with the requirements under the Directive but did not adequately describe the Enforcement Procedure.<sup>41</sup>

<sup>40</sup>

<sup>41</sup> <https://www.oireachtas.ie/en/accessibility-statement/>

## 12. The Competition and Consumer Protection Commission<sup>42</sup>

### Key findings

In total, 75 errors (71 WCAG 2.1 SC and 4 EN 301 549 clauses) were identified across 9 pages and 5 components assessed (Figure 48). This equates to a compliance rate of 60% for the WCAG 2.1 SC tested (Figure 49).

### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact (Figure 50).

### WCAG issues

Four success criteria, were related to 49% of all issues:

- Name, Role and Value – 21%

---

<sup>42</sup> Independent statutory body that enforces competition and consumer protection law in Ireland.

- Text Contrast – 12%
- Non-text Contrast – 9%
- Parsing – 7%

[See accessible table in Annex 5](#)

### EN 301 549 issues

Four EN 301 549 clauses related to Clauses 7.1.5 Spoken subtitles, 7.2.1 Audio description playback, 7.2.2 Audio description synchronization and 7.2.3 Preservation of audio description were deemed “Not supported”.

### PDF

Four additional WCAG 2.1 SC errors were identified on the PDF “Mortgages – shopping around checklist” reviewed.<sup>43</sup>

### Accessibility Statement

All essential aspects of the Accessibility Statement were found to be present.<sup>44</sup>

<sup>43</sup> <https://www.ccpc.ie/consumers/wp-content/uploads/sites/2/2017/03/9.Mortgageschecklist1.pdf>

<sup>44</sup> <https://www.ccpc.ie/consumers/accessibility/>

### 13. State Examination Commission<sup>45</sup>

#### Key findings

In total, 72 errors (72 WCAG 2.1 SC and 0 EN 301 549 clauses) were identified across 7 pages and 5 components assessed (Figure 52). This equates to a compliance rate of 84% for the WCAG 2.1 Success Criteria (SC) tested (Figure 53).

#### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact. However a relatively high number of Critical errors means that this site may significantly impact the ability of users with disabilities to access its content and use its key features (Figure 54).

#### WCAG issues

Four success criteria, were related to 93% of all issues:

---

<sup>45</sup> The State Examinations Commission is responsible for the development, assessment, accreditation and certification of the second-level examinations of the Irish state: the Junior Certificate and the Leaving Certificate.

- Non-Text Contrast – 41%
- Info and Relationships – 25%
- Colour Contrast – 16%
- Name, Role and Value – 11%

**Figure 55: No. of occurrences for top 10 WCAG errors**

[See accessible table in Annex 5](#)

### EN 301 549 issues

No failures were identified for the EN 301 549 clauses reviewed.

### PDF

Four additional WCAG 2.1 SC errors were identified on the PDF “Leaving Certificate Examination, 2022 English - Higher Level - Paper 1” reviewed.<sup>46</sup>

### Accessibility Statement

No identifiable Accessibility Statement was found on the website.

<sup>46</sup> <https://www.examinations.ie/archive/exampapers/2022/LC002ALPI00EV.pdf>

## 14. Dublin City Council

### Key findings

In total, 39 errors (39 WCAG 2.1 SC and 0 EN 301 549 clauses) were identified across 10 pages and 6 components assessed (Figure 55). This equates to a compliance rate of 68% for the WCAG 2.1 SC tested (Figure 56).

**Figure 57: Overall WCAG SC Compliance**

### User Impact

The majority of WCAG 2.1 SC failures were classified as having a “Serious” user impact (Figure 57).

### WCAG issues

Four success criteria, were related to 56% of all issues:

- Text Contrast – 21%
- Non-text Contrast – 15%
- Focus Order – 10%

- Meaningful Sequence – 10%

**Figure 59: No. of occurrences for top 10 WCAG**

[See accessible table in Annex 5](#)

### EN 301 549 issues

No failures were identified for the EN 301 549 clauses reviewed.

### PDF

Two additional WCAG 2.1 SC errors were identified on the PDF “Dublin City Council Complaint Form” reviewed.<sup>47</sup>

### Accessibility Statement

The Accessibility Statement does not contain critical content required by the Directive including a statement of compliance, information about the enforcement procedure or information about the last review conducted in the website.<sup>48</sup>

<sup>47</sup> [https://www.dublincity.ie/sites/default/files/media/file-uploads/2018-05/Customar\\_Complaint\\_Form\\_English.pdf](https://www.dublincity.ie/sites/default/files/media/file-uploads/2018-05/Customar_Complaint_Form_English.pdf)

<sup>48</sup> <https://www.dublincity.ie/using-dublincityie/website-accessibility>

## Simplified reviews

Simplified Reviews differ to In-depth Reviews in that they use automated testing to test a sub-set of WCAG 2.1 Success Criteria but on a much larger sample of up to 900 pages. Simplified Reviews cannot confirm compliance. However, the data produced provide public bodies subject to monitoring with a baseline understanding of their website's accessibility health and enable them to understand key trends through larger data samples. It provides public bodies with information, which enables them to direct resources to address priority issues and to continuously measure issues and improvements.

As outlined in the 2021 monitoring Report, NDA uses the aXeMonitor platform. Scans are conducted weekly and public bodies subject to monitoring have access to this scan data in addition to advice on how to address issues. Many public bodies use the scan results to make upgrades to the accessibility of their websites.

### Explanation of monitoring data for Simplified Reviews

#### Accessibility Score

An Accessibility Score is provided for each site in the form of a percentage. This is based on the number of pages containing Critical, Serious, Moderate or no issues and is calculated according the following formula:

$(0.4*p2 + 0.8*p1 + p0) / TP$ , where:

- $p2$  = number of pages with Serious issues
- $p1$  = number of pages with Moderate issues
- $p0$  = number of pages with no issues
- $TP$  = Total pages<sup>49</sup>

While the Directive and its Implementing Decisions do not require such a scoring, it is used in this report as a high level indicator of the accessibility 'health' of the website, and this information is provided to the public bodies in question. It is also intended to motivate public bodies to improve their Accessibility Score over time by addressing the most critical and serious issues first and seeing tangible improvements in the Accessibility Score.

---

<sup>49</sup> A website's Accessibility Score increases with fewer errors. Pages with no errors have an effective score of 1, page with critical errors get a score of zero.

## Simplified reviews results

NDA conducted Simplified Reviews on 185 websites. The data presented here is based on a snap shot of data taken during the last week of July 2022.

An average of 704 pages were tested per site. The average number of errors identified per site was 9,847. Overall, 77.8% of pages were found to have errors.

**Table 5: Overview of Simplified Review results**

<b>AVG pages tested</b>	<b>704</b>
<b>% of all pages with no errors</b>	22.2%
<b>AVG errors per site</b>	9,847
<b>AVG critical errors per site</b>	2,396
<b>AVG serious errors per site</b>	5,501
<b>AVG moderate errors per site</b>	20
<b>AVG minor errors per site</b>	1,930
<b>AVG errors per page</b>	13

## User impact

The majority of errors identified (5,501) were classified as “Serious”. While a relatively small number of Minor errors (1,930) were identified, the number of Critical errors (2,396) was higher. Critical errors prevent some users with disabilities from accessing certain parts of the content, potentially rendering it unusable.

## Average errors per page

A large majority of websites reviewed (113) contained either seven or more errors per page on average. Secondary analysis by NDA reviewers confirmed that many of the errors identified were the same error repeated either multiple times on the same page or the same errors occurring across multiple pages. For some categories of errors, repairing an error in the CSS file or in the HTML of the website's template can result in numerous errors being addressed.

## Types of errors

The most common error identified related to colour contrast. This error accounted for an average of 81 errors per site. Secondary analysis by NDA reviewers confirmed that the high volume of colour contrast errors on many sites occurs because of colour contrast failures associated with the page template for a site.

PDFs account for the second highest average number of errors per website. While many public bodies have informed NDA of ongoing work to improve the accessibility of their PDFs, the volume of PDFs on many public sector websites mean that in many cases these improvements have little impact on the overall number of PDF errors.

The error "Name Role Value" is frequently associated with how interactive elements are coded on pages such as search forms, application forms, cookie banners and other interactive widgets. Similarly, parsing is associated with how pages are coded, and if HTML is coded correctly.

**Figure 62: WCAG 2.1 Success Criteria With Most Issues Found - All Sites**

### Accessibility scores

Only 7.5% of websites attained an Accessibility Score of 90% or higher. In contrast, 28% of websites had an Accessibility Score of 10% or less. A number of websites significantly improved their score over the monitoring period. For example, the Health and Safety Authority improved their accessibility score from 42% to 97% from May to November 2022. South Dublin County Council and Sligo County Council both increased their score from just above 30% to above 80%. Donegal Education and Training Board showed the strongest improvement, going from a score of 10% in May 2022 to 73% in November 2022.

### Categories of websites

The EU Web Accessibility Directive requires National Monitoring Bodies to review the websites of a variety of types of organisation, including public bodies at local government level, and public bodies that provide public services that are a priority for persons with disabilities. The following section shows monitoring data specific to the following priority sectors:

- Local Authorities
- Transport Service Providers
- Higher education institutions
- Further and adult education institutions

## I. Local Authorities

NDA conducted Simplified Reviews on the main websites of 29 Local Authorities.<sup>50</sup> Local Authority websites are large and complex and provide a wide range of information and services to the public.

### Errors and user impact

The average number of errors on the 29 Local Authority websites was nearly twice that of all other websites reviewed (Figure 62). However, the average Accessibility Score for Local Authorities (35.3%) is slightly higher than for all sites (33.7%) (Figure 63). This indicates that while Local Authority websites contain a much higher average number of errors per website, the user impact of the errors identified is on a par with that of other websites reviewed.

**Figure 63: Average Number of Errors Per Site for Local Authorities**

**Figure 64: Average Accessibility Scores - Local Authorities v All sites**

### Types of errors – Local Authorities

The most common errors identified on Local Authority websites are broadly similar to those found on all sites, with errors related to Colour Contrast, PDF and Parsing accounting for the top three errors (Figure 64).

---

<sup>50</sup> Louth County Council and Leitrim Country Council website were not scanned due to security measures in place on those sites.

**Figure 65: Frequency of Occurrences of Main Errors - Local Authorities**

#### **Errors and Accessibility Score per site – Local Authorities**

There was a very large variance in the number of errors across all Local Authority websites reviewed (Figure 65). While Wicklow County Council is a clear outlier in terms of the number of errors identified (202,519), it is useful to consider that large scale automated scanning can capture multiple instances of an error on a page or across hundreds of pages. It is necessary therefore to consider also the impact of these errors on end-users. This is accounted for through the Accessibility Score which assigned a weighting to the seriousness of the user impact for each error. (See Figure 63 above)

**Figure 66: Total Number of Errors per Site - Local Authorities**

[See accessible table in Annex 5](#)

Figure 65 demonstrates that while there is some correlation between the number of errors on some sites and their Accessibility Score, this does not hold for all sites. For example, only 231 errors were automatically identified on the Kilkenny County Council website and this contributed to its Accessibility Score of 96.1%. In contrast, the 202,519 errors identified on Wicklow County Council resulted in an Accessibility Score of 35.6%, when the user impact weighting is applied. This is slightly higher than the average Accessibility Score across all Local Authority websites (35.3%).

NDA recommends that public bodies subject to monitoring focus on addressing the most serious errors in the first instance. However, it is also important to consider the large volume errors as many of these may be easily fixed by updates to a website's HTML template or CSS file.

It is noteworthy that some Local Authorities are using their monitoring data to make significant improvements. While Mayo County Council's Accessibility Score at the time

of the data snapshot in July for this Monitoring Report was 0.3%, at the time of writing (October 2022) the Accessibility Score had risen to 79.1%.

[See accessible table in Annex 5](#)

## 2. Transport Service Providers

Transport providers tend to have smaller websites on average but these typically contain a lot of functionality and complex interactions.

### Errors and user impact

The average number of errors on the five transport service provider websites was considerably lower than that of All Sites reviewed (Figure 67). However, the average Accessibility Score for transport providers (26.3%) was low and below the average accessibility score for All Sites (33.7%) (Figure 68). While transport providers' websites on average contain a lower number of errors per website, the user impact of the errors identified are more serious in comparison to other websites reviewed.

### Types of errors - Transport Service Providers

The most common errors identified on transport Service Providers' websites are Colour Contrast, Text Alternatives and ARIA and differ to the top errors identified across All Sites (Figure 69). The error "Text Alternatives" is usually associated with missing alternative text – a basic accessibility requirement which most sites monitored have addressed. The very high number of Alternative Text errors among this cohort is due mainly to the high rate of failures for this checkpoint on the Dublin Bus website. This error aside, and the high number of errors related to ARIA, Parsing and Name, Role Value point to issues with the form-based functionality used for looking up routes, booking tickets and other features typically available on transport provider's websites.

This points to a lack of consistency with how this functionality is designed and developed and the incorrect application of ARIA mark-up.<sup>51</sup>

**Errors and Accessibility Scores per site – Transport Service Providers**

There was a very large variance in the number of errors across all Transport Service Providers websites (Figure 70). While Colour Contrast accounted for a large of errors on three of the sites, errors associated with the design of interactive elements such as journey planners and real-time information associated have a higher impact on end users, which is reflected in the Accessibility Score.

<sup>51</sup> ARIA is a W3C specification that stands for “Accessible Rich Internet Applications.” It consists of mark-up that can be added to HTML in order to communicate the roles, states, and properties of user interface elements to assistive technologies (AT)

The relatively low Accessibility Score of four of the five Transport Service Providers websites reviewed is associated with the large number of errors related to interactive elements on these websites. Many of these are Critical errors as they can block a user of Assistive Technology or a keyboard-only user completing a task.

Simplified Reviews can identify instances of errors, the combination of these errors on an interactive element can render that functionality unusable by some people. NDA recommends that for highly interactive websites such as transport websites that user testing is conducted with a variety of users to better understand the exact impact of these errors and inform their remediation.

### 3. Higher Education Institutions

NDA conducted Simplified Reviews on the main websites of 23 Higher Education institutions (HEIs). The Simplified Reviews did not include student or staff extranets such as Learning Management Systems or other online services provided by HEIs accessed via a username and password.

#### Errors and user impact – Higher Education Institutions

The average number of errors on HEI websites was marginally higher than that of All Sites reviewed. The average Accessibility Score for HEIs (31%) was lower than that for All Sites (33.7%).

#### Errors and Accessibility Score per site – Higher Education Institutions

There was a very large variance in the number of errors across all HEI websites (Figure 74). As newer Technological Universities such as the Atlantic Technological University (ATU), Munster Technological University (MTU), Technological University of the Shannon (TUS) and the South East Technological University (SETU) consolidate their web presence, these institutions have an opportunity to significantly improve the accessibility of their web presence.

**Figure 75: Total Number of Errors per Site - Higher Education Institutions**

[See accessible table in Annex 5](#)

There is a strong correlation between a low number of errors and a high Accessibility Score across HEI's. DCU, for example, with the highest Accessibility Score of 66% of all HEIs also had one of the lowest number of errors. While the average Accessibility Score across HEIs was only slightly lower than the average across All Sites, DCU, as the highest scoring HEI was placed 54<sup>th</sup> in terms of overall rankings of websites reviewed. This is a relatively low ranking for the highest scoring website from the HEI sector. Overall, HEI websites contain a lot of errors that should be addressed as part of routine and ongoing development and maintenance of their websites.

**Figure 76: Accessibility Scores - Higher Educational Institutes**

[See accessible table in Annex 5](#)

### Types of errors - Higher Education Institutions

Colour contrast accounted for the highest number of errors on a majority of HEI websites. Secondary analysis by NDA indicated that a large number of these errors were the result of poor colour combination choices on webpage templates related to the institution's branding. NDA recommends that colours chosen for organisation's brand identity should be tested to ensure they meet accessibility thresholds for use on the web. Recent good examples of practice include the University of Galway's (formerly NUI Galway) rebranding and renaming exercise in which the corporate colours provide sufficient contrast when used on the new website.<sup>52</sup>

<sup>52</sup> <http://universitygalway.ie> The University of Galway (formerly NUI Galway) data presented in this report relates to the older site which was live in July 2022, <http://nuigalway.ie>

Errors related to “Name, Role Value” were frequently associated with interactive elements on the website which have not been designed or fully tested for accessibility.

4. Further Education and training institutions

NDA conducted Simplified Reviews on the main websites of 16 Further Education and Training Institutions (FETs). The Simplified Reviews did not include student or staff extranets such as Learning Management Systems or other online services provided by FETs accessed via a username and password.

Errors and user impact – Further education and training institutions

The average number of errors on FETs websites was higher than that of All Sites reviewed. This contributed to a lower Accessibility Score for FETs (28.9%) than that for All Sites (33.7%).

Types of errors – Further education and training institutions

Colour contrast again accounted for the highest number of errors on a majority of FET websites. In contrast to the HEI sector, PDFs accounted for the second most common highest number of website errors. NDA recommends that public bodies consider publishing as much of their content as possible to websites in HTML. Where PDFs are used they should be tagged and checked for accessibility.<sup>53</sup>

53

**Figure 80: Frequency of Occurrence of Main Errors - Further Education and Training**

### **Errors and Accessibility Score per site – Further education and training institutions**

As with other sectors analysed in this section of report, there was a large variance in the Accessibility Score of websites reviewed. It is noteworthy that Donegal ETB, with the highest scoring websites in this sector, has progressively reduced its number of errors, and made particular progress in addressing the accessibility of priority PDFs across the monitoring period.

**Figure 8I: Accessibility Scores - Further Education and Training Institutes**

[See accessible table in Annex 5](#)

The following tables are provided for public bodies to review their high-level monitoring data, to assess their performance in comparison with other public bodies and to identify at a glance the main issues identified as part of their Simplified Review.

Annex 2 provides pertinent data for each organisation in alphabetical order subject to a Simplified Review.

Annex 3 provides the same data, sorted according to websites' Accessibility Scores (highest to lowest).

Annex 4 provides the most frequently occurring issues for each website.

Annex 5 provides an accessible version of some figures in a table format.

## Conclusion

This report contains all supplemental monitoring data for Ireland required by the EU Web Accessibility Directive for the monitoring period 2021. This completes NDA's monitoring and reporting obligations for this period.

All monitoring data contained in this report has been shared with public bodies.

NDA has observed some public bodies make significant improvements in the accessibility of their websites through using their monitoring data to drive improvements. In particular, many public bodies in this monitoring period have addressed a high volume of issues related to colour contrast and incorrect coding of page template elements.

NDA will continue to conduct In-depth and Simplified Reviews on priority websites and mobile apps identified by persons with disabilities on an annual basis. NDA is currently implementing an "EU Web Accessibility Directive Monitoring and Reporting Platform" to provide public bodies with access to their review results, provide notifications on resources and training and answer queries.

NDA continues to collaborate with the Irish Computer Society to provide training events and information webinars on web and mobile app accessibility and related topics.<sup>54</sup>

NDA will publish an annual monitoring report every year and submit the next monitoring report to the European Commission for the period 2022-2024 in December 2024, as required under the Directive.

## Annex I – EN 301 549 clauses

### Clause 5: generic Requirements

Criteria	Remarks and Explanations
5.2 Activation of accessibility features	The buttons used to turn on the audio for screen reader users are not keyboard accessible. When the focus moves to the Play button, upon pressing Enter a tooltip appears, and that tooltip is not keyboard accessible rendering the functionality not operable for someone who cannot see.
5.2 Activation of accessibility features	The buttons to turn on the screen magnification and colour scheme of the page do not meet the WCAG contrast requirements of SC 1.4.11 (non-text contrast).
5.3 Biometrics	Biometrics are not used to access the website
5.4 Preservation of accessibility information during conversion	The website does not convert information

### Clause 7: ICT with Video Capabilities

Criteria	Remarks and Explanations
7.1.1 Captioning playback	Multimedia Content is not provided as part of the scope for the assessment.
7.1.2 Captioning synchronization	Multimedia Content is not provided as part of the scope for the assessment.
7.1.3 Preservation of captioning	Multimedia Content is not provided as part of the scope for the assessment.
7.1.4 Captions characteristics	Multimedia Content is not provided as part of the scope for the assessment.
7.1.5 Spoken subtitles	Multimedia Content is not provided as part of the scope for the assessment.

Criteria	Remarks and Explanations
7.2.1 Audio description playback	Multimedia Content is not provided as part of the scope for the assessment.
7.2.2 Audio description synchronization	Multimedia Content is not provided as part of the scope for the assessment.
7.2.3 Preservation of audio description	Multimedia Content is not provided as part of the scope for the assessment.
7.3 User controls for captions and audio description	Multimedia Content is not provided as part of the scope for the assessment.

#### Clause 9: Web

From EN 301 549, Clause 9.0 General (informative): “Conformance with W3C Web Content Accessibility Guidelines (WCAG 2.1) [5] Level AA is equivalent to conforming with all of clauses 9.1 to 9.4 and the conformance requirements of clause 9.6 of the present document.”

#### Clause 12: Documentation and Support Services

Criteria	Remarks and Explanations
12.1.1 Accessibility and compatibility features	Accessibility Statement is provided.
12.1.2 Accessible documentation	Reference WCAG 2.1 assessment for any identified issues.

## Annex 2 - Simplified Review results in alphabetical order
